Software Engineer

Junior Software Engineer with over a year of hands-on experience building responsive web applications using Javascript and modern web technologies.

CORE COMPETENCIES:

- **Languages & Technologies:** JavaScript, HTML5, CSS3.
- **Libraries/Frameworks:** React
- **CMS:** WordPress

WORK EXPERIENCE

Upwork 08/2024 - 01/2025

Contract Web Developer Remote

- Built and maintained responsive websites for Web3 and blockchain projects to showcase launched products, features, and roadmap details.
- Developed landing pages and project dashboards displaying token information, utilities, and community links.
- Implemented dynamic content sections for project updates, launch announcements, and ecosystem overviews using HTML, CSS, and JavaScript.
- Customized and managed Wordpress-based sites for Web3 startups, including theme customization and content updates.
- Collaborated with clients to translate project requirements into clean, user-friendly web interfaces aligned with brand identity.
- Optimized website performance and responsiveness across devices to improve user engagement and accessibility.

Femtech Information Technology Ltd 01/2024 - 06/2024

Software Engineering Intern

Kwara, Nigeria

- Built and maintained web pages using HTML, CSS, and JavaScript
- Assisted in updating and managing Wordpress-based websites
- Collaborated with team members to implement features and fix UI issues
- Gained hands-on experience with real-world development workflows

Markee's Media 08/2022 - Present
Research Assistant / Outreach Specialist (Web3)
Part-time | Remote

- Conducted research on Web3 and blockchain projects to support content strategy and client campaigns.
- Analyzed project fundamentals, use cases, and launch details to help position Web3 products to target audiences.
- Assisted with outreach initiatives by identifying potential partners, communities, and platforms for project visibility.
- Advised on Web3 project presentation, including website content structure, feature explanations, and roadmap clarity.
- Collaborated with media and marketing teams to ensure accurate and engaging representation of blockchain projects.
- Reviewed and suggested improvements to Web3 project websites for clarity and user experience.
- Tested production-ready Web3 websites and crypto payment flows, evaluating wallet interactions, transaction usability, and performance, and provided recommendations to optimize payment experience and reliability.

PERSONAL PROJECTS

- **FinanceFlow:** FinanceFlow is a fully responsive, multi-page business platform engineered for seamless navigation and cross-device compatibility. It bridges the gap between complex organizational structures and intuitive user experience by utilizing a clean, modular architecture. The project focuses on high-performance layout transitions and professional-grade UI, ensuring a consistent and reliable flow for commercial data. It represents a modern approach to building scalable, interactive business environments.
- **Numify:** Numify is a numerical architecture tool designed for high-precision data processing and algorithmic efficiency. By moving beyond standard inputs, it provides a streamlined environment for managing complex variables with structural integrity. It is a clean, human-centric engine built for those who prioritize computational accuracy over basic utility.
- **TipSwift:** TipSwift is a specialized performance-incentive engine designed to streamline the allocation of service-based rewards within professional environments. It provides a high-precision framework for calculating merit-based contributions, ensuring transparent and efficient distribution across team structures. The application prioritizes a clean,

responsive interface to handle variable inputs with structural integrity and speed. It is a modern solution for businesses looking to enhance their service culture through data-driven reward mechanics.

- **ClimaCore**: ClimaCore is an environmental intelligence engine designed to turn complex atmospheric data into high-precision, actionable insights. By prioritizing granular data modeling over generic updates, it provides a sophisticated layer of predictive clarity for navigating daily shifts. It's built for those who value technical depth and a "human-centric" interface over standard, surface-level information.
- **TimeTally**: TimeTally is a precision temporal engine designed to transform chronological data into high-fidelity life metrics. Moving beyond basic inputs, it provides a sophisticated architectural layer for calculating and visualizing time-based milestones with absolute accuracy. The interface is engineered for a seamless, human-centric experience, offering a refined way to track the progression of specific timeframes. It is a clean, modular solution for those who value structural clarity in their personal data.
